

Hydraulic Bolting, Flange Management

& Pre-Commissioning

Over a half century of experience in hydraulic bolting and flange management.

It's hard to imagine that something as small as a single bolt can wreak havoc in an oil field. But if the bolt is not torqued to the correct specifications, major problems can ensue. That's why you need the professionals at Greene's for your hydraulic bolting and flange management requirements.

Hydraulic Bolting, Flange Management & Pre-Commissioning

Reducing downtime and improving safety is the benchmark for Greene's in the oil patch. As an integrated services provider, we provide the experienced crew and specialized bolting and torquing equipment needed to both reduce downtime and keep your drilling operations running safely and smoothly.

Torque and Bolting Equipment

We maintain a large inventory of dedicated hydraulic torque wrenches, hydraulic pumps and power pack units to ensure both high-speed operation and peak field productivity. Within our stable of equipment, we use HYTORC® hydraulic torque wrenches, one of the leaders in hydraulic torque tools. For safe and cost-effective well completion and production, you can rely on Greene's for testing and torquing of production trees, lubricators and flowback manifolds. We also carry a complete line of rental equipment for completion services, all of which are designed for safe and efficient operation.

We Do It Right the First Time, and Every Time.

All of Greene's field personnel have strict policies and procedures they follow when in the field. Each and every one of our field employees carries with them a torque field guide, ensuring that there will be no inaccuracies when it comes to applying the correct ft. lbs. of torque to the bolt. Our quality control procedures include logs to show all of the time spent in the field.

Certified and Recognized

We are certified as an ISO 29001 company, as well as certified by API 6A and 16B. In addition, we are also recognized by OSHA's (Occupational Safety and Health Administration) SHARP (Safety and Health Achievement Recognition Program).

We Also Offer Pre-Commissioning Services

In addition to the services mentioned above, Greene's also offers a full service Pre-Commissioning package to ensure safe and precise operations during construction and prior to production. Greene's Pre-Commissioning services improve assembly standards, enhance project performance, and they save time and money for our customers.

Our Pre-Commissioning services include:

- Bolt Torqueing
- Bolt Tensioning
- Flange Management
- Hydrostatic Testing
- Hot Oil Flushing
- High Velocity Flushing
- Chemical Flushing
- Millwrights
- Passivation and Pickling

While other companies may offer some of these services on an individual basis, the strength and depth of Greene's Energy Services allows us to offer all of these services and more, all backed by the wealth of experience that Greene's has developed for over a half century.

Focus on Safety

At Greene's, safety is our first priority. Experience, knowledge, responsiveness and attention to

safety have made Greene's Energy Group an industry leader. This mission guides the company's growth and expansion plans for all of its energy service businesses. Protecting the health and safety of our people and the public, preserving the environment and preventing damage to property are paramount.

You Require. We Respond.

A leading provider of integrated testing, rentals and specialty services, Greene's Energy Group offers tools and services to improve productivity onshore and offshore.
