

Pressure Testing & Services

Greene's
Energy Group™

BOPs are there to keep your equipment, people and the environment safe. Think of us as an insurance policy for your BOPs.

Greene's Energy Group was founded more than a half century ago as a blowout preventer (BOP) testing company. Over the last 60 years, our focus on both innovation and safety has continued to keep us as a leader in BOP testing, bolting, and stack lifting services.

Pressure Testing & Services

The company you hire could be the difference between a producing well or a catastrophic event. Many of the BOP testing procedures used in the oil and gas industry today were developed by Greene's over the past half century. Our goal now, as it was then, is to ensure that BOPs and all other associated equipment operate correctly under the varying pressures that are an integral part of today's ever-changing drilling and production methods.

Utilizing our proprietary torque manual, competency test and BOP training tower, Greene's service personnel go through a rigorous training and testing regimen – including API flanges and corresponding torquing parameters; lubrication usage; Bonnet bolt torque requirements; bolt and gasket charts; wrench size; and torquing sequence – to ensure safe and efficient operations.

Our services are not limited in either scope or location. Some of the services we provide both onshore and offshore, in shallow and deep water, and in any type of terrain include:

- BOP Pressure Testing
- Stack Lifting Services
- Hydraulic Torquing and Bolting Services
- Hydraulic Rig-up Trucks and Gin Truck Services
- Rig-up and Rig-down Services
- Casing Cutting Services
- Pumping Services
- Spools and DSAs
- Wear Bushings
- Retrieving Tools
- Associated Rentals
- Proprietary Lubricants - .06 Friction Coefficient
- In-house Engineering Services
- BOP Training/Handling

Digital Recording Devices

As an alternative to the physical chart recorder, Greene's utilizes DataCan technology, a digital data acquisition system with pressure and temperature gauges calibrated to the variables to be measured. A DataCan transducer converts readings from the BOP to digital output in a laptop computer running DataCan software.

Pressure and temperature measurements over a given time can be exported to circular and linear graphs, with multiple variables on one graph.

Shear Ram & Pipe Qualification Certification

Greene's Energy Group offers the services of a professional engineer who will witness a shear test on location and collect relevant pressure data in order to provide the customer with a detailed report of the test results, calculations, and a BOP Certificate of Compliance. The professional engineer is also available to write and certify a Pipe Qualification Report to qualify pipe for shearing by a specific BOP type and configuration.

Stack Lifting

Our "always on call" fleet of stack lifting equipment and vehicles can handle virtually any situation in the field. A quick and easy rig-up means cost savings for our customers and less downtime. And as is always the case with all of our personnel, everyone is safety-trained and maintains a constant emphasis on the safest methods of operation.

Technical Bolting & Torqueing Services

We maintain a large inventory of dedicated hydraulic torque wrenches, hydraulic pumps and power pack units to ensure both high-speed operation and peak field productivity. Within our stable of equipment, we use state of the art hydraulic equipment. Our constantly serviced inventory of specialized hydraulic equipment is designed to provide the most accurate torqueing of your production equipment in the field. In addition, we can save you time and money by providing and applying our own lubricants which deliver a more accurate coefficient of friction when torqueing to the required tensions.

Certified & Recognized

We are certified as an ISO 29001 company, as well as certified by API 6A and 16B. In addition, we are also recognized by OSHA's (Occupational Safety and Health Administration) SHARP (Safety and Health Achievement Recognition Program).

Focus on Safety

At Greene's, safety is our first priority. Experience, knowledge, responsiveness and attention to safety have made Greene's Energy Group an industry leader. This mission guides the company's growth and expansion plans for all of its energy service businesses. Protecting the health and safety of our people and the public, preserving the environment and preventing damage to property are paramount.

You Require. We Respond.

A leading provider of integrated testing, rentals and specialty services, Greene's Energy Group offers tools and services to improve productivity onshore and offshore.
